FILTRATION SOLUTIONS

Dryer Systems

Heatless Regenerating Adsorption Dryers

Ultrapac® HED-ALD-MSD 0050 - 1000

MAIN FEATURES & BENEFITS

- Purification package incl. high-efficiency filters UltraPleat® S as pre- and afterfilter
- Pre filter with electronic level-controlled condensate drain incl. function control and alarm message
- Generous dimensioned filters:
large filtration surface, therefore low pressure drop and low operating costs
- Comprehensive option package:
dewpoint dependent capacity control, start-up-device, bypass line, pneumatic controller, free of silicone and parting agents, etc.
- 12 sizes available, matching to to the compressor flow capacities, with 3 pressure dewpoint options
- Robust design with welded steel vessels and galvanized pipelines and press fittings with aerodynamic and leakage-proof design
- Service-friendly design of shuttle valves and solenoid valves for fast replacement of wear parts

HED-ALD-MSD
0050 - 1000

INDUSTRIES

- Chemical and electrical industry

- Machine building industry and
plant engineering / construction

- Automotive industry

Donaldson®
Ultrafilter

PRODUCT DESCRIPTION

Compressed air is lead through the inlet of the dryer (J) and across the prefilter (3). At this stage, the air is cleaned from particles and condensate. The condensate is removed via the level-controlled electronic condensate drain (11).

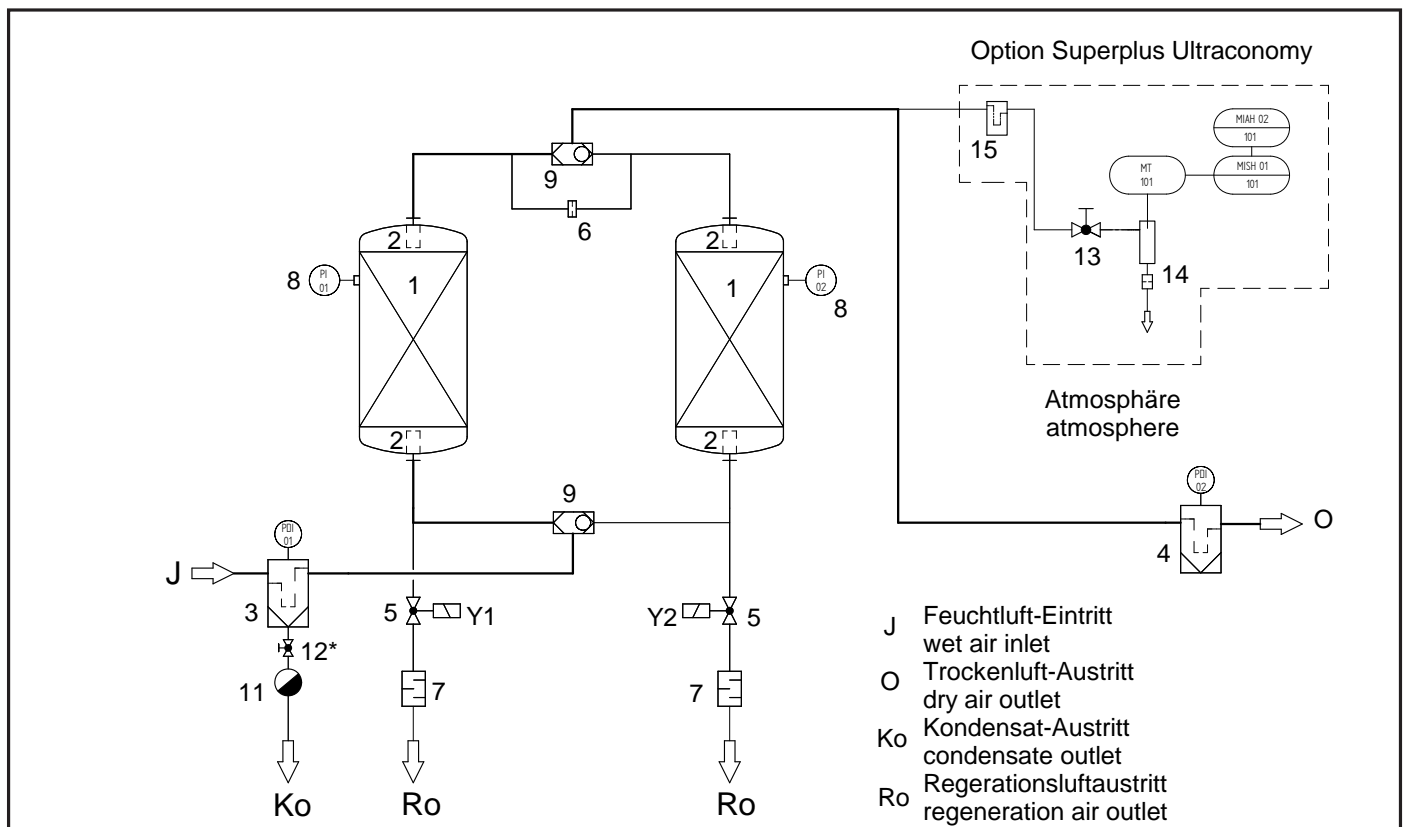

Via the lower shuttle valve (9), the air is lead into the adsorption vessel (1), in which the air is dried down to the required dewpoint. Via the upper shuttle valve (9), the air is let into an afterfilter (4), in which possibly released particles from the desiccant bed are retained. Via the outlet (O), the clean and dry air is lead into the compressed air network and to the point of use.

While one vessel is in the drying phase (adsorption), the other vessel is being dried again (regeneration).

A partial stream of dried air is expanded to atmospheric pressure via a nozzle (6) and lead across the desiccant bed for regeneration and via a solenoid valve (5) and a silencer (7) to the atmosphere.

Typical applications for the adsorption dryers HED-ALD-MSD are:

- Central compressed air purification**
 Generation of dry, oil-free and particulate-free compressed air
- Point-of-use applications**
 Drying and purification of control and instrument and process air
- Automotive industry**
 Purification of compressed air for painting applications

PRODUCT SPECIFICATIONS

Features:	Benefits:
Purification package incl. high-efficiency filters UltraPleat® S as pre and after filter	High oil- and water aerosol retention efficiency on pre- filter and high particulate retention efficiency on after filter at very low differential pressure
Pre filter with electronic level-controlled condensate drain incl. function control and alarm message	No compressed air loss through condensate drain, therefore reducing of operating costs; control of drain function ensures safe operation of dryer
All dryers in cabinet construction	Optimum protection against mechanical damage and against dirt
Welded steel vessels and galvanized pipelines and press fittings	Robust design with aerodynamic and leakage-proof design
Generous dimensioned filters	Large filtration surface, therefore low pressure drop and low operating costs
Intermittent operation standard	Link between dryer and compressor possible on central applications, therefore saving of compressed air
12 sizes available, matched to the compressor flows, with 3 selectable pressure dewpoints each	Custom made solutions possible, matching exactly customer's requirements; no oversizing of compressors necessary, due to lowest possible regeneration air requirements
Comprehensive option package: Dewpoint depending control, start-up device, bypass, pneumatics control, free of silicone and release agent etc.	Flexibility in application, well thought option package for economical operation and safe system installation in the compressed air network
Service-friendly design of shuttle valves	Fast replacement of wear parts ensure low service and maintenance cost and reduced downtime
Superplus Version including dewpoint dependent capacity control and text display	Saving of energy and operational cost due to adaption of the purge air consumption to the actual operating conditions. Indication of current dewpoint and function status as well as alarm and service messages on LCD text display in clear text ensures high operating safety of the adsorption dryer.

Technical Data	
Operating pressure:	min. 4 bar (g) / max. 16 bar (g)
Ambient temperature:	min. +4°C / max. +50°C
Medium temperature:	max. +50°C
Medium:	Compressed air / nitrogen
Power supply:	230 VAC / 50-60 Hz or 115 VAC / 50-60 Hz or 24 VDC
Power consumption	40 W
Declaration of Conformity	
Types 0050 - 0175:	acc. to Directive 2006/95/EC
Types 0225 - 1000:	acc. to PED 97/23/EC
Pressure vessel – design, manufacture, testing	
Adsorber:	acc. to Directive 2009/105/EC
Filter:	acc. to PED 97/23/EC

* on request			Correction factors (f)													

Example:

$\dot{V}_{nom} = 200 \text{ m}^3/\text{h}$, inlet temperature = 30°C, operating pressure = 10 bar (g), PDP = -40°C

$$\dot{V}_{korr} = \frac{\dot{V}_{nom}}{f} = \frac{200 \text{ m}^3/\text{h}}{1,51} = 132,5 \text{ m}^3/\text{h}$$

**Calculated dryer size:
ALD, Type 0150**
